1. Page 213, Theorem 9.6. A directed graph $G$ with no isolated vertices has a closed Eulerian trail if and only if it is strongly connected and balanced.

3. Page 365, Exercise 14. The correct question is $S_n(123, 132, 213)$. The answer then is indeed a Fibonacci number, since the permutation must start either with $n$ or with $(n - 1)n$.

The answer to the question asked in the exercise is that $S_n(123, 132, 312) = n$, since the position of $n$ determines everything else.

5. Page 460 last line of the first paragraph of the proof of Corollary 17.16. It should be $\lambda J$, not $J$.

6. Page 468, first letter of the fourth row of 17.5.3 should be ”c”, not ”C”.

7. Page 468, line above Definition 17.25. ”T*” should be ”T”.

8. Page 469, middle of page. The converse of Theorem 17.27 is not true. (”17.27” is missing)

9. Page 471, third row of the proof of Theorem 17.32. ”the same row” should be ”a row”.

10. Page 493, Example 18.17. It should be $|G_i|$, not $G_i$.
