Preface 1: Purpose	2
Preface 2: Background and Dedication	3
1 Introduction: From Linear Algebra to Linear Analysis	11
1.1 Three variations of Fourier analysis	12
1.1.1 Fourier Series	12
1.1.2 The Discrete Fourier Transform	13
1.1.3 The Continuous Fourier Transform	14
1.2 Motivations	14
1.2.1 Exploration and Understanding	15
1.2.2 Manipulation	16
1.2.3 Compression	17
1.3 Linear Algebra, Linear Analysis, and Fourier Analysis	18
1.3.1 Eigenvectors and Eigenvalues in Linear Algebra	18
1.3.2 Orthogonal Diagonalization	20
1.3.3 Diagonalization in Linear Analysis: Eigenfunctions	21
1.3.4 Fourier Analysis	22
2 Basic Fourier Series	25
2.1 Fourier Series on $L^2[a, b]$	25
2.1.1 Calculating a Fourier Series	28
2.1.2 Periodicity and Equality	32
2.1.3 Problems and Exercises	34
2.2 Orthogonality and Hilbert Spaces	35
2.2.1 Orthogonal Expansions	38
2.2.2 Problems and Exercises:	39
2.3 The Pythagorean Theorem	40
2.3.1 The Isometry between $L^2[a, b]$ and l^2	41
2.3.2 Complex Notation	43
2.3.3 Estimating Truncation Errors	46
2.3.4 Problems and Exercises:	49
2.4 Differentiation and Convergence Rates	49
2.4.1 A Quandary between Calculus and Fourier Analysis	50
2.4.2 Derivatives and Rates of Decay	51
2.5 Gibb's Ringing Phenomenon	52

2.6	Sine and Cosine Series	54
2.6.1	Problems and Exercises:	58
2.7	Perhaps Cosine Series Only	59
2.7.1	Induced Discontinuities vs. True Discontinuities	62
2.7.2	Problems and Exercises:	63
2.8	Convolution and Correlation	63
2.8.1	A classic example	65
2.8.2	Problems and Exercises:	66
2.9	Chapter Project:	66
2.10	Summary of Expansions:	69
3	The Discrete Fourier Transform	71
3.1	The Fourier Matrix	72
3.1.1	Orthogonality of the Fourier Matrix	73
3.2	The Complex Nth roots of unity and their structure	74
3.2.1	The roots of unity and frequency	77
3.2.2	Making the Fourier Matrix Understandable	78
3.2.3	Problems and Exercises:	79
3.2.4	Group structure of the roots of unity	80
3.2.5	Subgroups and Coset Representations	82
3.2.6	Problems and Exercises:	83
3.3	The Fast Fourier Transform	83
3.3.1	Speed Enabling Algorithm	84
3.3.2	The simplest examples: F_2 , F_4 and F_8	84
3.3.3	The FFT in the Classic Case $N = 2^q$	88
3.3.4	The FFT when $N = N_1 N_2$	93
3.3.5	Problems and Exercises:	94
3.4	Discrete Convolution and Correlation	95
3.4.1	Circulant Toeplitz Matrices	97
3.5	Applications of Convolution and Correlation	98
3.5.1	Derivatives via Convolution	99
3.5.2	Averaging	102
3.5.3	Narrowband and Nonlinear filtering	103
3.5.4	Matched Filtering	106
3.5.5	Problems and Exercises:	108
3.6	Computing Sine and Cosine Expansions Using the FFT: Compression	109
3.6.1	Cosine expansions	109
3.6.2	Sine expansions	111
3.6.3	Piecewise Cosine and Sine expansions	111
3.6.4	Problems and Exercises:	112
3.7	Chapter Project	112

4 The Fourier Transform	115
4.1 From Fourier Series to the Fourier Transform	115
4.2 The Fourier Isometry from $L^2(\mathbb{R})$ to $L^2(\mathbb{R})$	118
4.2.1 Problems and Exercises:	119
4.3 The Basic Theorems of Fourier Analysis	120
4.3.1 Differentiation	120
4.3.2 Translation	121
4.3.3 Convolution and Correlation	122
4.3.4 Dilation and Uncertainty	125
4.3.5 The Fourier transform of a Gaussian	129
4.4 The Inverse Transform	130
4.4.1 Proving the Fourier Inversion Formula	130
4.4.2 Problems and Exercises:	132
4.5 Partition of Unity	133
4.6 Revisiting Gibbs' ringing	134
4.6.1 Problems and Exercises:	136
5 Sampling and Interpolation	139
5.1 The Shannon Sampling Theorem	140
5.1.1 Recalling Polynomial Interpolation	144
5.1.2 Shannon's Theorem: Advantages and Disadvantages	144
5.2 Advanced Interpolation Theory	146
5.2.1 Basic Ideas	146
5.2.2 Oversampling and Adaptive Windows	148
5.2.3 Interpolating Window Functions	150
5.2.4 Approximate Window functions:	153
5.2.5 Problems and Exercises:	156
5.3 Aliasing	156
5.3.1 Anti-Aliasing Filters	158
5.3.2 Problems and Exercises:	159
5.4 Numerical Computation of the Shannon Series	160
5.4.1 Example 1: Exact Interpolation	160
5.4.2 Example 2: Approximate Interpolation	162
5.4.3 Problems and Exercises:	164
5.5 Chapter Project:	165
6 Digital Communications	167
6.1 Introduction and Basic Terms	167
6.1.1 Definitions from Communications	170
6.2 Modulation	171
6.2.1 Analogue vs. Digital	171
6.2.2 AM vs FM	172
6.2.3 RZ vs. NRZ	172
6.3 The Eye Diagram	174
6.3.1 Interference	175
6.4 Fourier Constraints	179

6.4.1	Uncertainty, Dilation, and ISI	179
6.4.2	Uncertainty, Dilation, and CCI	180
6.5	Statistics and Matched Filtering	181
6.5.1	Gaussian White Noise	184
6.5.2	Averaging Noise	186
6.5.3	The Matched Filter	187
6.5.4	Transmitter and Receiver Details	190
6.5.5	Problems and Exercises	191
7	Radar Processing	193
7.1	Range and Velocity Measurements	193
7.1.1	Range Measurements	193
7.1.2	Simple Range Resolution	194
7.1.3	Velocity Estimation and Resolution	195
7.2	Radar Range Equation	195
7.3	Signal to Noise Management in Radar	197
7.3.1	Matched Filter	198
7.3.2	Signal Averaging	198
7.3.3	Heterodyne Receivers	201
7.3.4	IF Band-Pass Filters	201
7.4	Revisiting Range Resolution: Uncertainty and Bandwidth	202
7.5	Doppler Measurement and Resolution	206
7.5.1	Doppler from a moving Target	206
7.5.2	Doppler from a moving Source	207
7.5.3	Doppler Resolution	208
8	Image Processing	213
8.1	Fourier Analysis in \mathbb{R}^n	213
8.2	Edge Detection	214
8.2.1	Horizontal and Vertical Edges: Standard Approximations	216
8.2.2	Exact Partial Derivatives and Directional Derivatives .	220
8.3	Interpolation: High Definition TV and beyond	220
8.3.1	Revisiting Shannon and Advanced Interpolation	220
8.3.2	Regaining a .jpg image in matlab: Normalization and Format	225
8.4	Compression	225
8.4.1	Shannon Sampling, Compression and Interpolation	225
8.4.2	Fourier Truncation	226
8.4.3	Periodization and Fourier Truncation	228
8.4.4	Blocking, Compressing, and Smoothing Images	230
8.4.5	Periodization and Blocking	236
8.4.6	Compressing Modern Images	236
8.5	Chapter Project:	239

9 Medical Imaging	241
9.1 Computerized Tomography	241
9.1.1 Projections, or Line Integrals of a 2-D function	242
9.1.2 The Radon Tranform, or Central Slice Theorem	244
9.1.3 Filtered Backprojection	248
9.1.4 Nonlocality of the Radon transform	249
9.1.5 Localized Imaging	251
9.2 Magnetic Resonance Imaging	255
9.2.1 NMR and the Larmor Frequency: Making the Moments Sing	256
9.2.2 Relaxation times: T_1 and T_2 times	257
9.2.3 MRI by way of Tomography	259
9.2.4 MRI via Phase Encoding	260
9.3 Chapter Project:	263
10 Partial Differential Equations	265
10.1 Ordinary Differential Equations: The Spring Equation	265
10.2 The Wave Equation	266
10.2.1 The Bound String Equation	266
10.2.2 Separation of Variables	267
10.2.3 Revisiting Completeness and Sine Transforms	269
10.2.4 Eigenfunctions: Musical Overtones	270
10.2.5 Problems and Exercises:	271
10.2.6 Two Dimensional Wave Equation: The Square Drum	273
10.2.7 Problems, Exercises, and Projects	275
10.3 The Heat Equation	277
10.3.1 A One Dimensional Conductor	277
10.3.2 Eigenfunctions and Examples:	279
10.3.3 A Two Dimensional Example: The Heat Equation on a Square Plate	279
10.3.4 Problems, Exercises, and Projects:	282
