Course development at Florida

- 2017 Special Topics in Mathematics: Topological Data Analysis (MAT 4930) I developed a new course to introduce our undergraduate students to topology and how it can be used in applications, and also to introduce some of the most important tools in modern data science.
- 2017 Advanced Topics in Topology 2 (MAT 6932) I have developed a course to introduce our graduate students to some powerful mathematical tools for organizing mathematical structures and computations: category theory, homological algebra and spectral sequences.
- 2016 Advanced Topics in Topology (MTG 7396) I have developed a course to introduce our graduate students to new areas of current research in topology and their connections with other areas of mathematics and the sciences.

Course development at Cleveland State

- 2015 Special Topics in Mathematics – Topology (MTH 493/593) I developed a new course in Topological Data Analysis, accessible to students without prior knowledge of topology, in which they spent half of their class time in a computer lab learning to use Matlab to analyze data with topological tools.
- 2008–2013 Real Analysis (MTH 381 and MTH 415/515) This course had not been taught in many years. I redeveloped it and led the creation of a new cross-listed course accessible to undergraduate and graduate students to help ensure its viability.
