Appendix Figure A1: Dendrogram arising from group-average linking and the SIMPROF test of the bird species assemblages in the sites across the forest types; solid black lines indicate significant group structure at the 5% level.

Appendix Figure A2. Species which were recorded six times or less during the study. For each species we indicate the number of records in each forest type: seasonal semi-deciduous forest (SF), dense rain forest (DF), and mixed rain forest (MF).
