ECO 4400: Game Theory and Applications

Syllabus

Dr. Thomas Knight
Office: MAT 340
Office Hours: T/R 3:30-5:00pm

Spring 2015
Course Time: M/W 9:35-11:30am
Course Location: MAT 103
Email: thomas.knight@ufl.edu

Prerequisites: Principles in Microeconomics (ECO 2023 or equivalent) and Calculus I (MAC 2233 or equivalent)

Required Text: “Games, Strategies, and Decision Making” by Joseph E. Harrington

ASTER RESPONSIBILITIES --be careful to read the syllabus for unique features of this course

• Continued enrollment in this course is equivalent to acceptance of all stated responsibilities, policies, and due dates. If there is anything that is unclear, talk to me immediately. Waiting until the end of the term often results in less favorable outcomes.

• Students are expected to attend regularly and participate actively in this course. It is assumed that you have read the assigned material before attending class and are prepared to answer questions based on the readings.

• I ask a number of directed questions during the lecture period of the course. Students are selected at random (without replacement — in order to ensure that all students have an equal opportunity to answer questions) to answer questions based on the required readings and lecture material. These questions are not intended to trick you or “test” you on the required readings; they are simply intended to enhance course participation. You are free to “take a pass” if you do not feel comfortable answering a particular question.

• Students are expected to complete 10 analytic problem sets. These problem sets relate to the topics of the preceding lectures and are intended to offer you practice with the relevant solution techniques. In some cases, questions offer important extensions of the material covered in class. All problem sets are due at the beginning of class (i.e., 9:35am) on the due date; late problem sets will not be accepted for partial credit. See Page 5 for a more thorough explanation of problem sets.

• Students are expected to present their solutions to the analytic problem sets and other in-class handouts during class. On days when problem sets are due, the first portion of the course period is dedicated to student presentations of selected solutions. Students are selected at random (without replacement — in order to ensure that all students have an equal opportunity to answer questions) to present their solutions. If you are unsure of the solution, I will assist you in presenting the answer, but you will not be able to “take a pass.”

Note: Students will be able to collect their problem sets from me for their solution presentations. However, you will not have your problem sets when other students are presenting. I recommend making a photocopy of your problem set if you want to check your answers against the solutions presented in class.

• Any lapse of appropriate conduct while a fellow classmate is presenting may result in a final course grade reduction of one letter grade. Many people are afraid to present their own work in front of their peers, and it is our shared obligation to make their presentation as painless as possible.

• There are three in-class exams: Midterm 1 (February 18), Midterm 2 (March 30), and Midterm 3 (April 22).
COURSE RESOURCES (AND HINTS FOR SUCCESS)

• The problem sets are the greatest resource you have. These problem sets provide an almost-comprehensive review of the relevant course material and solution techniques. I highly recommend taking thorough notes when the solutions are presented in class, as solutions are not handed out in class.

• I provide sample exams (with solutions). These exams offer insight into the structure and difficulty level of the actual exams, but they do not necessarily cover the same material. Also, students regularly report that sample (or old) exams are less difficult than current term exams. Be prepared for this!

• Superficial cramming will not lead to success; keeping up with the material is essential. After each lecture, review your notes, and test whether you understand a particular concept. You may, for example, take an example from class in which I solved for Subgame Perfect Nash Equilibrium and ask how the equilibrium would change with a certain change in the players’ payoffs. These thought exercises increase your exposure to the material and sharpen your ability to apply the analytic tools covered in class.

• As with any “tools” course (e.g., mathematics), the only way to learn the material is to practice it. Take advantage of the many resources you have.

OFFICE HOURS

• You are encouraged to attend office hours; attendance is highly correlated with success in the course.

• Attempt problem sets before you bring questions to office hours; the problem sets are substantially less beneficial if you do not attempt them on your own.

GRADING POLICY AND SCALE

• Grades are calculated as follows: Analytic Problem Sets and Presentations (25%), Midterm 1 (25%), Midterm 2 (25%), and Midterm 3 (25%).

• Make-up exams must be arranged before the exam date/time and will only be offered for UF-related conflicts and religious holidays. Keep in mind that your academic obligations always take precedence over personal and social commitments.

• Unexcused absences from in-class exams result in a grade of 0.

• No Incompletes  No Grade Changes  No Extensions  No Substitute Work

A grade of C- is not a qualifying grade for major, minor, Gen Ed, or College Basic distribution credit. Requirements for class attendance and make-up exams, assignments, and other work in this course are consistent with university policies that can be found at:

http://catalog.ufl.edu/ugrad/current/regulations/info/grades.aspx
AND
http://catalog.ufl.edu/ugrad/current/regulations/info/attendance.aspx

ANALYTIC PROBLEM SET INFORMATION AND GUIDELINES

• You are required to demonstrate all of your work and provide thorough explanations to receive credit! Attach all of your work on additional sheets of paper. The problem sets typically do not have enough space for you to provide all of your work and the required explanations.

• You may work in groups; in fact, I highly recommend it. You are, however, required to submit individual problem sets for grading. Copying another student’s work is not permissible.

• Keep your problem sets when I hand them back!! Some questions refer to others from past sets.
ATTENDANCE POLICY
Irregular attendance and/or tardiness will most likely result in substantially reduced course performance, as well as reflect poorly upon your commitment to this course. Also, failure to notify me - before the class period in question - of an absence for a class period in which you are selected to present a problem set or in-class hand-out solution will result in a 50% reduction in the “Analytic Problem Sets and Presentations” portion of your grade. As a precaution, notify me of all absences.

GENERAL COMMENTS ON WELLNESS AND SUCCESS
College is an exciting learning experience and a unique opportunity for personal growth. It can, however, also be a stressful and difficult transitional period. If you are ever having general issues with your coursework in any course or trouble in your personal life, please seek help from myself or another faculty member. I also encourage you to utilize the FREE and ANONYMOUS services of the UF Counseling and Wellness Center.

Students with disabilities requesting accommodations should first register with the Disability Resource Center (352-392-8565, www.dso.ufl.edu/drc/) by providing appropriate documentation. Once registered, students will receive an accommodation letter which must be presented to the instructor when requesting accommodation. Students with disabilities should follow this procedure as early as possible in the semester.

ACADEMIC HONESTY
You are expected to abide by the University’s rules for academic honesty. These are available for your review at http://www.dso.ufl.edu/judicial/academic.php. Cheating, plagiarism, and any other action that violates these rules will be prosecuted to the fullest extent. It should be noted that creating an excuse to take a make-up exam that cannot be verified constitutes cheating under the University guidelines.

END–OF-TERM COURSE EVALUATION
I encourage you to fill out the online course evaluation form that is available at http://evaluations.ufl.edu. I will provide class time – during which I will leave the room – for you to complete this online form at the end of the term. This will be announced in advance, and you will be encouraged to bring a wifi-enabled device (e.g., a laptop, tablet, or smartphone) to class that day.

I will pass out an alternative (separate from the official University of Florida form) course evaluation form at the end of the course. The official University of Florida form does not offer much valuable information for future improvements of this course. Please, help me and future students by offering honest and thorough information -- I greatly appreciate constructive criticism. I will not read these evaluations until all grades have been submitted.
# COURSE OUTLINE (AND ASSIGNMENT SCHEDULE)

</table>
| January 12 | Introduction to Game Theory  
*Harrington*, Chapters 1 and 2  
Student Information Form due at the beginning of class |                    |
| January 14 | Dominant Strategies and Nash Equilibrium  
*Harrington*, Chapters 3 and 4  
Problem Set I due at the beginning of class (9:35am). |                    |
| January 19 | NO CLASS: Martin Luther King Jr. Day                                  |                    |
| January 21 | Alternate Strategies: Maximin, Maximax, and Minimax Regret Solvability  
*Reading Assignment TBA* |                    |
| January 26 | N-Player Games  
*Harrington*, Chapter 5  
Problem Set II due at the beginning of class (9:35am). |                    |
| January 28 | N-Player Games  
*Harrington*, Chapter 5 |                    |
| February 2 | Mixed Strategy Nash Equilibria  
*Harrington*, Chapter 7  
Problem Set III due at the beginning of class (9:35am). |                    |
| February 4 | Mixed Strategy Nash Equilibria  
*Harrington*, Chapter 7 |                    |
| February 9 | Subgame Perfection in Discrete Choice Games  
*Harrington*, Chapter 8  
Problem Set IV due at the beginning of class (9:35am). |                    |
| February 11| Subgame Perfection in Discrete Choice Games  
*Harrington*, Chapter 8 |                    |
| February 16| Exam Review  
Problem Set V due at the beginning of class (9:35am). This problem set will be made available the following day in my office. |                    |
| February 18| FIRST MIDTERM EXAMINATION                                              |                    |
| February 23| NO CLASS: Special Midterm Examination Office Hours                     |                    |
| February 25| Calculus Review, Partial Differentiation, and Profit Maximization      |                    |
| March 2    | NO CLASS: Spring Break                                                 |                    |
| March 4    | NO CLASS: Spring Break                                                 |                    |
L13  March 9  Continuous Games  
      Harrington, Chapter 6

L14  March 11  Continuous Games and Imperfect Competition  
       Harrington, Chapter 6

L15  March 16  Infinitely Repeated Games  
       Harrington, Chapters 13 and 14  
       Problem Set VI due at the beginning of class (9:35am).

L16  March 18  Infinitely Repeated Games  
       Harrington, Chapters 13 and 14

L17  March 23  Tacit Collusion: An application of Infinitely Repeated Games  
       Harrington, Chapters 13 and 14  
       Problem Set VII due at the beginning of class (9:35am).

L18  March 25  Exam Review  
       Problem Set VIII due at the beginning of class (9:35am). This problem set  
       will be made available the following day in my office.

March 30  SECOND MIDTERM EXAMINATION

April 1  NO CLASS: Special Midterm Examination Office Hours

L19  April 6  Imperfect Information: Simultaneous-play  
       Harrington, Chapter 9

L20  April 8  Imperfect Information: Simultaneous-play  
       Harrington, Chapter 9

L21  April 13  Imperfection Information: Bayesian Games  
       Harrington, Chapter 10 (10.1-10.3)  
       Problem Set IX due at the beginning of class (9:35am).

L22  April 15  Applications of Bayesian Games: Auctions and Voting  
       Harrington, Chapter 10 (10.4 & 10.5)

L23  April 20  Exam Review  
       End-of-Course Evaluations  
       Problem Set X due at the beginning of class (9:35am). This problem set  
       will be made available the following day in my office.

April 22  THIRD MIDTERM EXAMINATION
Student Information Form

ECO 4400: Game Theory and Applications

Name: ____________________________ Phone Number: ____________________________

Major: ____________________________ Email Address: ____________________________

Year (e.g., junior): ____________________________

May I include your phone number on the class list?  Yes _____  No _____

May I include your email address on the class list?  Yes _____  No _____

Principles in Microeconomics and Calculus are prerequisites for this course. Please confirm that you meet these requirements.

Which economics courses have you taken? Please make note of courses that were taken as Advanced Placement (AP) or at another college or university.

Which math courses have you taken? Please make note of courses that were taken as Advanced Placement (AP) or at another college or university.

What attracts you to the study of economics? What particular areas of economic inquiry interest you?

This is an elective course. What interests you about game theory?
